SUMMARY

Founding full-stack & AI engineer who ships products from zero to production solo — **RAG pipelines**, **LLM agents**, and the full application and infrastructure around them. Currently sole engineer on **Nexus Verify**, an AI compliance platform.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, SQL (Postgres), Go.

AI Engineering: **RAG** (hybrid vector + BM25, re-ranking), **Multi-Agent Orchestration** (AutoGen, LangGraph), Tool / Function Calling, **MCP**, **Structured Outputs** & Validation, Human-in-the-Loop / Guardrails, **Evals & Observability** (LangSmith, Ragas, LLM-as-judge), Fine-tuning / LoRA, Streaming, Prompt Caching.

AI Tooling & Models: **LangChain**, LlamaIndex, Vector DBs & Embeddings (pgvector), **OpenAI**, **Claude**, **Gemini**.

Frontend: **Next.js**, **React.js**, React Native (Expo), Redux Toolkit, TailwindCSS, Shadcn.

Backend: **Node.js**, **FastAPI**, **WebSockets**, Redis, Kafka, MongoDB, PostgreSQL.

DevOps & Cloud: **AWS**, **GCP**, Docker, Kubernetes, CI/CD pipelines.

Blockchain: Solidity, Web3.js / Ethers.js, Multi-chain (Ethereum, Polygon, Solana).

EXPERIENCE

Founding Full-Stack Developer

July 2024 - Present

Nexus Verify

Austin, Texas

- **Sole engineer behind the entire product** — took **Nexus Verify** from zero to a live production AI compliance platform (**LEED** green-building certification) used by US customers, cutting per-project certification work from **~50 hours to ~10 (80% faster verification)**.
- Architected the full stack — **Next.js** + **FastAPI**, hybrid monolith + microservices on **Kubernetes** / **Docker** / **AWS**, with **CI/CD** for both the web app and the RAG models, embedding **100k+ documents** for retrieval.
- Engineered the LLM pipeline for high-stakes reliability — **structured-output extraction** with deterministic validation, **confidence scoring** with human-review fallback, and audit trails — reaching **95%+ extraction accuracy**.

Founding Full-Stack Developer

Oct 2023 - June 2024

Sharp Minds Cloud Tech Pvt. Ltd.

Panaji, Goa

- **Founding engineer** for **MSME Sales Booster**, a **manufacturing ERP** — built the **mobile + web** app from zero to production (**Expo**, **React Native**), covering the full **Sales** → **Production** → **Inventory** → **Dispatch** flow (BOMs, work orders, stores, quality) on a single real-time data layer.
- Built the **task-driven execution engine** — every business action auto-creates tasks with ownership, deadlines, SLAs, and escalations across departments — the platform's core differentiator, eliminating missed follow-ups and manual handovers.
- Implemented real-time client/server sync over **WebSockets**, role-based access, and multi-level approvals; automated quotation generation (TinyMCE + Pug) that cut manual processing time by **60%**.

Blockchain Developer Intern

Jan 2023 - Sep 2023

Engineering Innovations Research Labs Pvt. Ltd.

Jabalpur, M.P.

- Built a **Web3 subscription platform** for recurring crypto payments — **Solidity smart contracts** for automated billing, multi-token wallet support (ETH, Polygon, stablecoins), and **Node.js** + **TypeScript** APIs optimized with Redis caching + load balancing for **45%** higher throughput.

Software Developer Intern

Aug 2022 – Dec 2022

Daphnisys Technologies Pvt. Ltd.

Pune, Maharashtra

- Built an **automated lead-qualification system** (**Gemini AI** + **LangChain**) that extracted structured insurance-claim data from **OpenPhone** call transcripts into **Slack** → **Salesforce** workflows on **GCP Cloud Run** — processing leads in under **30 seconds** with **80%+ extraction accuracy**.

EDUCATION

Madhav Institute of Technology and Science, Gwalior

June 2024

Bachelor of Technology in Information Technology

GPA: 7.89/10.0

ACHIEVEMENTS

- Former **ICPC Regionalist 2021** - [certificate](#), 3 star on **CODECHEF**, 2 star on **LEETCODE**.
- Achieved **1st** position in **CodeHeist** (a coding competition under CodeChef College Chapter) – [certificate](#)
